

Economic growth has to take care for natural resources and to serve social progress. We are responsible for the economic efficiency and the ongoing economic and ecological success of our company. Bolta Werke GmbH as medium-sized and producing company is aware of this responsibility for actual and future generations. Each individual should take care for maintain of the environment sustainable. Therefore we have established those environmental guidelines as firm criterion for business activities of our company and all our employees:

We define our ecological policy and commit an integrated environmental care out of the environmental guidelines passed by the Management. This environmental care makes up at the causes for environment damages and the effects of production processes and products to the environment which we evaluate ahead and include it in our managerial decisions.

guideline 1: leadership

Environment protection is an important component of our business goals. Based on the model of our managers our employees are encouraged in the active integration of the environmental care in production, development, research and administration. Everybody is responsible for environment protection. It's each employee's obligation to act environmentally compatible. Bolta Werke GmbH is supporting environmental awareness and knowledge of its employees by internal information, communication, education and training.

guideline 2: acting basis

Legal instructions and governmental restraints are fulfilled as minimum requirement. Whenever it is possible and economic defensible we are heading for benchmarks over the legal instructions and we are orientated on the state of the art and sustainability. A responsible handling of water, energy, chemicals, production material and all other goods is a self-evident matter for our employees.

guideline 3: environmental program / environmental objectives

We are taking care for a continual improvement of environmental protection by controlling and updating our goals and programs steadily. Further we are implementing methods, procedures and controlling concepts to reach and scheduled implement the several environmental goals. Effects for the environment are controlled, gathered and valued steadily. In case of variations to the terms of reference corrections are induced immediate.

guideline 4: prevention of adverse environmental effects

In research and development, production and administration as in all other departments we avoid and reduce sustainable economic effects, economic and ecological to a defensible size. In development of products and processes we are oriented on reduction of sustainable environmental effects. Therefore technical and logistical optimization of our production processes is an important part of our environmental commitment. With plans for emergency provision we assure that ecologically damaging events could be avoided or limited to a minimum. This happens in close collaboration to the responsible authorities and with instruction of our partners acting on our locations.

guideline 5: environmental forming

Apart from qualification and motivation of our employees we are also promoting the creativity and active interest to improve the operational environmental protection through continuous information, suggestion and specifically training measures. Bolta Werke GmbH hand on information to customers how to handle, transport, stock and use, utilize and dispose the products.

guideline 6: integration of all contracting parties

We are asking our partners to use the same benchmarks for environmental protection as we do. Our demand to produce as compatible to the environment as possible is also valid for material and components which we acquire from subcontractors.

guideline 7: communication and public relations

Another important issue is to lead an objective and open dialog with employees, customers, suppliers, authorities and general public to generate an interacted interdisciplinary understanding and acting. At the same time we are leading with active communication through all levels the motivation, responsibility and personal engagement of all employees for eco-friendly acting and active environment protection.
